According to our (Global Info Research) latest study, the global Industrial Aluminium Profiles market size was valued at US$ 88490 million in 2025 and is forecast to a readjusted size of US$ 119180 million by 2032 with a CAGR of 4.4% during review period.

Industrial aluminium profiles are extruded aluminium-alloy sections featuring good machinability, corrosion resistance and surface finishability, and they serve as structural and functional components across construction, industrial equipment and transportation. In 2024, production reached 23.71 million tons and the average price was $3,500 per ton. Typical single-line annual capacity was about 5,000 tons and the average gross margin was about 15%. The upstream includes electrolytic aluminium ingots, alloying elements mainly based on magnesium and silicon, and the manufacturing of casting-rolling, hot-rolling and surface-treatment equipment, with representative suppliers such as Alcoa, Rio Tinto, Rusal and Aluminum Corporation of China. The midstream covers alloy melting, extrusion or rolling, ageing, finishing and surface treatment, focusing on dimensional tolerance, surface consistency and mechanical performance. The downstream spans construction, industrial machinery, transportation and electrical and electronic applications, with typical customers including China State Construction Engineering, Sany, CRRC and Siemens.

Industrial aluminium profiles are expected to maintain steady global growth as lightweighting, modular design and green manufacturing continue to reshape the construction, machinery and transportation sectors. Demand will increasingly shift toward high-strength, high-precision and surface-engineered profiles that support smart factories, renewable-energy infrastructure and next-generation transportation platforms.
