An abrasive is a material of a certain hardness and density that allows other materials to be processed by removing the material itself. Abrasives are mainly used for industrial processing. They are particularly important in the metallurgical and automotive sectors.

The growth of the abrasives market is mainly driven by the continuous expansion of the manufacturing industry and technological upgrading, especially the increasing demand for precision machining in the automotive, mechanical processing and other fields. With the continuous improvement of high-end manufacturing requirements for machining accuracy, efficiency and surface treatment, the demand for high-performance and high-reliability abrasive products has risen significantly. In addition, the manufacturing activities in emerging economies such as China and India are expanding significantly. With the increase in manufacturing activities, the demand for abrasives for various processes such as grinding, polishing and surface finishing is growing, which has created a favorable market for the abrasives industry.
