Abstracts

A belt drive is a type of power transmission device which is a looped belt wound around a pair of pulley so as to transmit power between two or more rotating shafts. Compared to other power transmitting devices, belt drives are more preferred in mechanical industry due to easy installation, numerous speed ratio selections, less power loss and comparative low price.

SCOPE OF THE REPORT:

This report focuses on the Industrial Belt Drives in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Belt drive protects the rotating machinery from overload fluctuations by absorbing all shocks and vibration. Belt drive does not need lubrication and thus requires less maintenance.

Flat belts have better power transfer efficiency compared to V-belts because of little bending loss. They are widely used in textile, flour mill, conveyors, compressors, machine tools, and other heavy industrial equipment. V-belt is a belt having cross-section shape on its surface which provides a better grip on the pulley.

The worldwide market for Industrial Belt Drives is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
