According to our (Global Info Research) latest study, the global Industrial Boilers market size was valued at USD 12070 million in 2023 and is forecast to a readjusted size of USD 16210 million by 2030 with a CAGR of 4.3% during review period.

A boiler is typically a closed vessel and has water stored inside it. In this heating system, a furnace is required to heat the boiler. Fuels such as coal are used to generate the heat. Subsequently, the heated air comes in contact with the vessel and convection takes place, heating the water inside the vessel. The heated water eventually produces steam.

On the basis of type, the fire-tube segment dominated the market in 2017 and is also projected to grow at a higher rate than the water-tube segment owing to the compact design and efficient operation of fire-tube boilers.
