Abstracts

A boiler is typically a closed vessel and has water stored inside it. In this heating system, a furnace is required to heat the boiler. Fuels such as coal are used to generate the heat. Subsequently, the heated air comes in contact with the vessel and convection takes place, heating the water inside the vessel. The heated water eventually produces steam.

Scope of the Report:

This report focuses on the Industrial Boilers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

On the basis of type, the fire-tube segment dominated the market in 2017 and is also projected to grow at a higher rate than the water-tube segment owing to the compact design and efficient operation of fire-tube boilers.

Based on boiler horsepower, the industrial boilers market was dominated by the 10-150 BHP segment. Most of the end-use industries, such as chemical and food, prefer boilers in the 10-150 BHP range. Rising demand from the food & beverages industry, which is a major market for 10-150 BHP boilers, is expected to drive the 10-150 BHP segment of the industrial boilers market.

The industrial boilers market in the Asia Pacific region is anticipated to grow at the highest CAGR between 2018 and 2023. Asia Pacific is a leading market for industrial boilers mainly due to rising industrialization of the region's emerging economies, such as China, India, and ASEAN countries. The region is a major consumer of boilers, which are used in the food, chemical, refining, and metals & mining industries.

The worldwide market for Industrial Boilers is expected to grow at a CAGR of roughly

xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
