Abstracts

The global Industrial Brush Roller market size is expected to reach \$ 307 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, global industrial brush roller production reached 2.36 million meters, with an estimated average selling price of \$84 per meter. Industrial brush rollers are cylindrical rotating brush-like industrial components formed by fixing brush filaments through processes such as bristle implantation, winding, clamping, pressing, or bonding, using metal shafts, plastic cores, aluminum alloy cylinders, wood cores, or composite material roller cores as the base material. They are mainly used in production lines for cleaning, dust removal, deburring, polishing, grinding, conveying assistance, pressing, coating, static electricity removal, liquid removal, and surface treatment. Downstream applications cover steel, non-ferrous metals, automotive parts, machining, glass deep processing, PCB and semiconductor cleaning, food processing, wood furniture, textiles, packaging, photovoltaics, lithium batteries, home appliance manufacturing, sanitation equipment, and automated conveyor lines. The upstream of the industry chain mainly includes nylon, PP, PBT, PET, abrasive filaments, stainless steel wire, copper wire, natural fibers, aluminum alloy profiles, steel shafts, plastic cores, adhesives, and machined parts. The midstream involves industrial brush design, filament selection, roller core processing, bristle implantation/winding/assembly, dynamic balancing testing, and customized processing. Downstream sales are conducted through equipment manufacturers, industrial consumables distributors, MRO channels, end-user factories, and equipment maintenance service providers. Gross profit margins range from approximately 18% to 35%.
