Abstracts

An Industrial burner is a mechanical device which uses gas or liquid fuel to produce flames in a controlled manner.

Scope of the Report:

This report focuses on the Industrial Burners in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The petrochemicals segment has been reporting a higher consumption of these burners compared to other end users. The scenario is likely to remain so over the next few years due to a robust rise in the demand for petrochemicals in developing regions, particularly in Asia Pacific. In 2016, North America dominated the global market for industrial burners with an overall contribution of 3.8 B USD in terms of revenue.

Due to the various regulations introduced by governments across the world, it has become important for all manufacturers to produce energy efficient burners. Also, many manufacturers are now focusing on new technologies that will reduce the cost of production, apart from also reducing emissions from industrial furnaces. Industrial burners bring about complete combustion of the air and fuel which, in turn, reduces carbon dioxide emission. Many companies, in the steel industry specially, are now focusing on research and developments to produce energy efficient industrial burners.

One of the major trends being seen in the industrial burner market is the use of renewable fuel oil. With increasing focus on reducing emissions so to avert negative changes in climatic condition, it has become important to use renewable fuel for operations. Companies are investing hugely in R&D for developing such industrial

burners.

The worldwide market for Industrial Burners is expected to grow at a CAGR of roughly 2.7% over the next five years, will reach 10800 million US\$ in 2023, from 9230 million US\$ in 2017, according to a new GIR (Global Info Research) study.
