According to our (Global Info Research) latest study, the global Industrial Calibration Service market size was valued at US\$ 487 million in 2025 and is forecast to a readjusted size of US\$ 737 million by 2032 with a CAGR of 6.0% during review period.

Industrial Calibration Service refers to the technical services provided by professional organizations or technical teams to perform accuracy testing, error correction, and performance verification on various instruments, meters, and equipment used in industrial production and scientific research, in accordance with national/international metrological standards. Its core purpose is to ensure that the measurement results of instruments and equipment are accurate and reliable, conform to industry norms and quality standards, guarantee stable production processes, controllable product quality, and valid experimental data, while also meeting compliance audits and safe production requirements. Service targets cover measuring instruments, testing equipment, and production automation systems, with common types including calibration in multiple fields such as length, temperature, pressure, electrical, and optics.

Global regulatory systems across industries are becoming increasingly stringent, with manufacturing, healthcare, aerospace, and new energy sectors demanding higher compliance standards for equipment calibration. Mandatory and periodic calibrations have become essential components of business operations. Simultaneously, the unification of international metrology standards is driving calibration services towards standardization and regulation, giving service providers with authoritative certifications a competitive edge.

With the rapid development of high-end industries such as intelligent manufacturing,

semiconductors, new energy vehicles, and biomedicine, the demand for calibration of high-precision, complex instruments and equipment is surging. This is propelling industrial calibration services from traditional basic metrology to high-precision instrument calibration, automated system calibration, and online real-time calibration, significantly increasing both the technological barriers and the added value of services.
