Industrial CAN to fiber converter is a communication interface device used in industrial automation networks. It can convert the electrical signals of the controller area network (CAN bus) into optical signals and transmit them through optical fibers. Its core function is to solve the problem of reliable data transmission in long distances (up to 20km) and high electromagnetic interference (EMI) environments. It is suitable for harsh scenarios such as automobile manufacturing, power systems, rail transit and ships. The device usually supports CAN 2.0A/B protocol, has electrical isolation (2500V), wide temperature (-40°C~85°C) and anti-vibration design to ensure industrial-grade stability and real-time performance.
