According to our (Global Info Research) latest study, the global Industrial Catalyst Services market size was valued at US$ 875 million in 2025 and is forecast to a readjusted size of US$ 1307 million by 2032 with a CAGR of 6.0% during review period.

Industrial Catalyst Services is a comprehensive technology and value-added service system designed around the entire lifecycle of catalysts used in industrial production. It integrates "technology research and development, testing and characterization, engineering practice, operation and maintenance optimization, and resource utilization." At its core, it addresses the catalytic process needs of industries such as petrochemicals, environmental protection, new energy, and fine chemicals. Through professional technology, equipment, and team collaboration, it solves the pain points throughout the entire process of catalyst development, from laboratory to industrial application, and from operation and maintenance to resource recycling. This ensures long-term stable operation of catalytic units, improves catalytic reaction efficiency, reduces production costs, meets environmental compliance requirements, and ultimately provides core support for the high efficiency, greenness, and sustainability of industrial production.

Key market trends include: first, the continued pursuit of longer operating cycles and reduced downtime for refining and petrochemical units is driving demand for catalyst loading/unloading, reactor maintenance, and dense-phase loading services; second, rising prices for metals such as precious metals, molybdenum, vanadium, nickel, and cobalt?combined with increasing environmental disposal costs?are making catalyst regeneration, rejuvenation, and recovery services more economically attractive; third, tightening global emissions regulations are fueling demand for catalyst lifecycle

management services related to SCR denitrification, VOC abatement, hydroprocessing, and the production of low-sulfur and clean fuels; fourth, heightened safety requirements are driving service upgrades toward robotic catalyst unloading, minimal or no human entry into confined spaces, operations in inert atmospheres, and digital maintenance; and fifth, emerging processes?such as those for biofuels, sustainable aviation fuel (SAF), green hydrogen, methanol-to-olefins (MTO), and CO? utilization?are creating new opportunities for catalyst-related services.
