Abstracts

An industrial centrifuge is a machine used for fluid/particle separation. Centrifuges rely on the use of centrifugal force, generating several hundreds or thousands of times earth's gravity. Industrial centrifuges are used for separating solids from liquids, liquid-liquid separation, and liquid-liquid-solid separation.

According to our (Global Info Research) latest study, the global Industrial Centrifuges market size was valued at USD 8319.2 million in 2022 and is forecast to a readjusted size of USD 10820 million by 2029 with a CAGR of 3.8% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

On the basis of type, the filtering centrifuges segment is expected to register the highest CAGR during the forecast period. Factors such as their efficiency in continuous operations and processing feed slurries with high solid concentration coupled with their increasing application in the chemicals, pharmaceuticals and biotechnology, and food processing industry are expected to drive the market for filtering centrifuges.
