In 2025, the global production capacity of Industrial Cleaning Solvent was approximately 5.15 million tons.

Industrial Cleaning Solvent refers to chemical liquids used to remove oil, grease, residues, flux, dust, and other contaminants from industrial parts, equipment, and surfaces. These products are widely used in metal processing, electronics, machinery, automotive, and maintenance applications where cleaning efficiency, evaporation behavior, material compatibility, and residue control are critical.

The industrial chain of Industrial Cleaning Solvent includes upstream petrochemical feedstocks, alcohols, hydrocarbons, additives, surfactants, and packaging materials. Midstream covers formulation, blending, filtration, filling, and quality inspection. Downstream applications mainly include metal cleaning, electronics cleaning, machinery maintenance, automotive parts processing, industrial degreasing, and maintenance service operations.

The industrial cleaning solvent market is driven by manufacturing, automotive,

electronics, and machinery maintenance needs. Demand is shifting toward low-VOC, biodegradable, non-flammable, and environmentally friendly formulations to meet stricter safety and emission regulations. High-performance degreasing, precision cleaning, and material compatibility remain key requirements. Growth is supported by industrial automation, component cleanliness standards, and circular economy practices.
