According to our (Global Info Research) latest study, the global Industrial Compute Gateway market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Growing Industrial IoT (IIoT) Adoption: The industrial compute gateway market has been influenced by the increasing adoption of Industrial Internet of Things (IIoT) solutions. Industrial compute gateways serve as the interface between the IIoT devices and the central processing system, enabling data collection, analysis, and control. With the growing demand for connected industrial systems, the market for industrial compute gateways has witnessed significant growth.

Edge Computing and Fog Computing: Edge computing and fog computing have gained traction in industrial applications. These approaches involve processing data closer to the edge of the network, reducing latency and improving real-time decision-making capabilities. Industrial compute gateways play a crucial role in enabling edge and fog computing by providing local processing power and connectivity.

An Industrial Compute Gateway is a specialized device or system used in industrial settings to connect and bridge various industrial devices, sensors, and equipment to higher-level networks and computing infrastructure. It serves as a communication interface between the operational technology (OT) systems on the shop floor and the information technology (IT) systems in the enterprise network.
