According to our (Global Info Research) latest study, the global Industrial Computed Tomography market size was valued at USD 197.6 million in 2023 and is forecast to a readjusted size of USD 309.1 million by 2030 with a CAGR of 6.6% during review period.

The Industrial Computed Tomography market covers High Energy Industrial CT, Low Energy Industrial CT, etc. The typical players include GE Measurement & Control, Yxlon International, ZEISS, Nikon Metrology, North Star Imaging, etc.

X-ray computed tomography is a well-known method in clinical diagnostics, which is becoming more and more present in the field of industrial NDT. While the basic principles are common for both fields, a medical CT scanner requires a complex system of a rotating X-ray source and detection system - the so called gantry - to keep the patient in a stable position, whereas in an industrial CT system, the object itself can be easily rotated by a turntable. An increasing number of industries are discovering that X-ray CT scanning is a vital tool to ensure the highest product quality. Some of the key uses for industrial CT scanning have been flaw detection, failure analysis, metrology, assembly analysis and reverse engineering applications.

Major players in the industry include GE Measurement & Control, Yxlon International and ZEISS, which accounted for 24%, 13.96% and 14% of revenue, respectively. By region, the European region had the highest share of income, at 50 percent.
