Industrial CT may be referred to as a computer-aided tomographic process, also popularly known as X-ray computed tomography. It uses irradiation for producing 3D illustrations of scanned objects both on the outside as well as on the inside.

Scope of the Report:

This report focuses on the Industrial Computed Tomography in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. It is mostly used in many industries for inspecting components internally. The global industrial CT market is at a nascent stage in terms of market adoption. CT is identified as a favorable solution for quality inspection and control, and hence many OEMs and research organizations are pursuing the development of CT systems and broadening their applications.

Industrial CT facilitates analysis of faults, material, and density analysis or the examination of completeness and coordinate metrology in 3D. The CT scanning allows manufacturing plants to significantly reduce new product ramp up (an increase in firm production ahead of anticipated increases in product demand) and troubleshooting times, thereby optimizing production parameters, avoiding recalls, detecting problems at an early stage, and avoiding a scrap.

The worldwide market for Industrial Computed Tomography is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
