Abstracts

The global Industrial Computer Peripherals market size is expected to reach $ 1726 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Industrial Computer Peripherals refer to specialized peripheral hardware devices designed to work with industrial computers, embedded computers, industrial control systems, and automation equipment to provide data input, equipment control, human-machine interaction, data acquisition, and system expansion functions. Compared with consumer computer peripherals, industrial computer peripherals place greater emphasis on high reliability, continuous operation capability, and stable performance under harsh industrial environments. These products are typically designed with features such as dust resistance, waterproof protection, vibration resistance, corrosion resistance, electromagnetic interference (EMI) protection, and wide-temperature operation capability. Industrial computer peripherals mainly include industrial keyboards, rugged keyboards, industrial mice, trackballs, industrial scanners, industrial input devices, and other peripheral equipment used for industrial computer interaction and data collection. They are widely applied in manufacturing automation, smart factories, energy and utilities, transportation, medical equipment, logistics and warehousing, defense, and outdoor industrial control systems. Driven by industrial automation, Industrial Internet of Things (IIoT), and smart manufacturing development, demand for industrial computer peripherals featuring high reliability, environmental durability, and long service life continues to increase.
