## Abstracts

According to our (Global Info Research) latest study, the global Industrial Control System (ICS) Security market size was valued at USD 14790 million in 2023 and is forecast to a readjusted size of USD 19810 million by 2030 with a CAGR of 4.3% during review period.

ICS security are used to protect industrial control systems which are operated in various fields such as electrical, oil & gas, chemical, pharmaceutical and manufacturing. This security system monitors and controls the overall industrial environment. The security system includes infrastructure which is networked with the communication technologies. Security systems monitor the events and devices by having in-built IT systems that manage the adjustments in industrial operations.

The driving force behind the growth in industrial control system (ICS) security market include growth in adoption of cyber security technology in order to prevent the organization and individual from threats. The ICS security identifies and prevents the attacker from acquiring control over the system. The advantage of using this system is that adopting the use of IT networks provides flexibility and scalability. The drawback of using ICS security is that if the basic network security is not handled properly then there is a possibility of attacker to acquire control over the system.
