Abstracts

The global Industrial Cooling Systems Rental Service market size is expected to reach \$ 2761 million by 2032, rising at a market growth of 8.4% CAGR during the forecast period (2026-2032).

Industrial cooling system leasing is a new business model that replaces equipment sales with 'capacity delivery.' Service providers license specialized temperature control assets such as chillers, cooling towers, industrial ice storage, and heat exchange stations to industrial clients, separating ownership from usage rights. They also provide comprehensive lifecycle management, including system design, rapid deployment, operation and maintenance, energy efficiency optimization, and decommissioning. This model addresses seasonal peak demand, production line expansion, or emergency equipment needs in scenarios such as chemical reactor temperature control, data center temperature control, food quick-freezing, and plastic molding. It delivers stable cooling capacity on a monthly billing cycle, helping manufacturing companies transform multi-million dollar asset purchases into flexible operating expenses billed by tonnage or hour.

Under the triple pressure of EU carbon tariffs, China's energy efficiency 'leader' policy, and tightening cash flow in the manufacturing sector, industrial cooling leasing is transitioning from a 'marginal alternative' to a 'mainstream option,' with its penetration rate projected to exceed 18% of the industrial temperature control market by 2030. The focus of technological competition will shift from single-unit reliability to system marginal cost optimization: phase change energy storage modules enable peak-shifting during off-peak hours, digital twins allow for real-time coupling of unit evaporation temperature with load demand, and refrigerant pump linkage technology will improve the partial load efficiency ratio to over 7.0. In the next five years, smart cooling source fleets embedded

with real-time carbon footprint accounting and supporting virtual power plant frequency regulation response will become standard infrastructure for attracting investment to high-energy-consuming industrial parks, with leasing rates linked to the proportion of green electricity trading and grid demand-side response subsidies.
