Abstracts

According to our (Global Info Research) latest study, the global Industrial Cuprous Oxide market size was valued at US\$ 734 million in 2025 and is forecast to a readjusted size of US\$ 981 million by 2032 with a CAGR of 4.3% during review period.

Industrial cuprous oxide is a red to reddish-brown powdery inorganic compound, insoluble in water. It is industrially produced by heating copper powder with copper oxide and is an important copper compound.

The upstream core raw materials are high-purity electrolytic copper and auxiliary acid/base reagents. The midstream involves the preparation and fine processing of cuprous oxide. The technological barriers at this stage lie in particle size distribution control and surface stabilization treatment, especially in marine antifouling paint applications, where micro-powders need to be coated to regulate their copper ion release rate in seawater. Downstream applications are highly diversified, primarily covering marine antifouling coatings, agricultural fungicides, glass and ceramic colorants, and emerging photocatalysis and solar cells.

Global sales in 2025 are estimated at approximately 70,000 tons, with an average selling price of US\$10,950 per ton. The industry's gross profit margin is between 20% and 30%.
