According to our (Global Info Research) latest study, the global Industrial Cyber Range market size was valued at US\$ 1358 million in 2025 and is forecast to a readjusted size of US\$ 2181 million by 2032 with a CAGR of 7.0% during review period.

Industrial Cyber Ranges are advanced simulation platforms designed to replicate industrial control system (ICS) and operational technology (OT) environments for cybersecurity training, testing, and validation. These platforms enable realistic attack simulation, vulnerability assessment, incident response training, and security solution validation. They are widely used in energy, manufacturing, transportation, defense, and critical infrastructure sectors to improve cyber resilience and operational security readiness. The gross profit margin of major companies in the industry is between 45% ? 72%.

The Industrial Cyber Range market is a rapidly expanding segment within the cybersecurity training and industrial security simulation industry, driven by increasing cyber threats targeting critical infrastructure and industrial control systems. These platforms provide realistic environments for attack simulation, vulnerability assessment, incident response training, and security validation. Market growth is supported by rising investments in cybersecurity training, stricter regulatory requirements, and the digital transformation of industrial systems. The expansion of smart manufacturing, energy digitalization, and critical infrastructure modernization further accelerates adoption. Technological advancements in virtualization, digital twin modeling, and cloud-based simulation are enhancing platform scalability and realism. However, the market faces challenges such as high deployment costs, complex system integration, and the need for specialized expertise. Overall, the industry demonstrates strong growth potential,

closely linked to global cybersecurity readiness and industrial digital transformation.
