Abstracts

The global Industrial Decommissioning Services market size is expected to reach \$ 9761 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Industrial decommissioning services provide a comprehensive, systematic, and professional solution for the safe closure, equipment removal, site cleanup, pollution control, and resource recovery of permanently closed industrial facilities. The core goal is to ensure the safety and compliance of the decommissioning process, maximize asset recovery, and ecologically restore contaminated sites to meet pre-defined reuse standards, thereby mitigating environmental and safety risks and fulfilling corporate social responsibility.

As global industrial facilities gradually enter an aging cycle, the energy structure shifts towards low-carbon development, and environmental regulations become increasingly stringent, industrial decommissioning services are upgrading from traditional engineering demolition to a comprehensive high-end service industry integrating safety engineering, environmental science, and resource recycling. Driven by nuclear power plant decommissioning, chemical industrial park relocation, coal-fired power plant shutdowns, and the renovation of old industrial bases, the number of decommissioning projects worldwide is rapidly increasing, especially in Europe, the United States, and China, which are entering a concentrated decommissioning cycle. At the same time, the complexity of decommissioning projects is constantly increasing, placing higher demands on radioactive treatment, hazardous waste management, and environmental remediation technologies, leading the industry to gradually develop towards high technological barriers, high qualification thresholds, and system integration capabilities. In the future, industrial decommissioning services will be deeply integrated with carbon

neutrality goals, the circular economy, and land redevelopment, becoming a key component of the green infrastructure system and exhibiting a long-term, sustainable growth trend.
