Abstracts

The global Industrial Demagnetizer market size is expected to reach $ 816 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

Industrial Demagnetizers are equipment used to reduce or eliminate residual magnetism in ferromagnetic workpieces, tools, molds, bearings, shafts, gears, steel components, precision machined parts, and electronic or automotive components. The equipment generates an alternating magnetic field or controlled demagnetizing pulse to gradually reduce residual magnetism, improving machining quality, cleaning performance, assembly reliability, measurement accuracy, and product safety. Main product forms include benchtop demagnetizers, tunnel demagnetizers, coil demagnetizers, conveyor demagnetizers, handheld industrial demagnetizers, and customized automatic demagnetizing systems.The industrial chain of Industrial Demagnetizers includes upstream suppliers of electromagnetic coils, copper wire, magnetic cores, power modules, frequency converters, control boards, sensors, conveyor belts, frames, housings, cooling components, switches, and electrical components. Midstream manufacturers integrate demagnetizing coils, power control systems, pulse generators, workpiece handling units, conveyors, human-machine interfaces, safety protection modules, and automation systems into complete equipment. Downstream applications include automotive parts, bearings, tools, molds, machinery manufacturing, aerospace components, electronics, metalworking, heat treatment plants, inspection laboratories, and maintenance workshops. Supporting services include equipment selection, magnetic field testing, installation, commissioning, maintenance, coil replacement, calibration, process optimization, and spare parts supply.In 2025, global Industrial Demagnetizer production reached approximately 45,000 units, with an average global market price of around US$12,000 per unit. The gross profit margin of major companies in the industry is between 30%?50%. In 2025,

the global production capacity of industrial demagnetizers was approximately 64,286 units.

The Industrial Demagnetizer market is driven by precision machining, automotive parts manufacturing, bearings, tools, molds, aerospace components, electronics, and automated metalworking lines. Residual magnetism can cause metal chips to adhere to parts, affect cleaning and measurement, reduce assembly reliability, and interfere with sensors or electronic components. Therefore, demagnetizing equipment is increasingly used as a process-control device in machining, grinding, heat treatment, inspection, and automated production. Industry suppliers provide benchtop, tunnel, coil, conveyor, and customized demagnetizing systems; tunnel and conveyor demagnetizers are especially suitable for continuous production lines. Manufacturers are improving demagnetizing depth, magnetic field control, energy efficiency, automation compatibility, conveyor integration, safety protection, and process repeatability. Overall, the market is expected to grow steadily with precision manufacturing, industrial automation, and higher requirements for product cleanliness, measurement accuracy, and assembly reliability.
