According to our (Global Info Research) latest study, the global Industrial Dielectric Heating Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Dielectric heating is a generic term that includes both microwave and radio frequency heating. There are two main mechanisms in which heat is produced in dielectric materials: ionic polarization and dipole rotation. The major heating mechanism in microwave heating is dipole rotation, in which polar molecules (water being the most common polar material in foods) are rotated by the alternating microwave field resulting in frictional heat generation. Ionic conductivity is more important during radio frequency heating and occurs when ions in solution move in response to an electric field; the ions are accelerated and collide with each other converting kinetic energy into heat.
