Industrial dust treatment systems are equipment and technical systems specially designed to handle dust generated during industrial production. Many industrial processes (such as metal processing, construction, chemical production, food processing, etc.) will release a large amount of dust. If these dusts are not effectively treated, they will not only affect air quality and endanger workers' health, but may also cause safety hazards such as fire or explosion. Therefore, the main function of industrial dust treatment systems is to remove these dusts, keep the production environment clean, ensure workers' safety, and comply with environmental protection regulations.
