According to our (Global Info Research) latest study, the global Industrial Electric Parallel Gripper market size was valued at US\$ 329 million in 2024 and is forecast to a readjusted size of USD 2062 million by 2031 with a CAGR of 30.3% during review period.

An industrial electric parallel gripper is a robotic end-effector designed to handle objects by grasping them with two jaws that move in parallel, typically powered by electric actuators such as servo motors, DC motors, or stepper motors. These grippers are used in industrial automation and robotic systems to carry out tasks that require precise manipulation of objects, with the ability to handle a wide range of materials and component sizes. The key distinguishing feature of this type of gripper is the parallel jaw movement, where both jaws open and close in a synchronized, parallel motion to ensure the object is securely gripped without tilting or shifting.
