Abstracts

Traditionally the industrial networks were managed separately from enterprise networks, and they were communicating via different switches routers and protocols. Enterprise networks include data routing, e-mail networks, Internet & intranet servers. However, with the implementation of Ethernet cables across all network layers has allowed a reliable, fast and real-time communication of data. They can carry data from factory floors to the enterprise resource planning layers with higher bandwidth, and as a result of these, the market for Ethernet cable is anticipated to grow over the forecast period.

SCOPE OF THE REPORT:

This report focuses on the Industrial Ethernet Cables in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Cabling is the passive infrastructure of industrial Ethernet. It is vital to maintaining reliable transmission of critical data over industrial networks for most manufacturing processes. As a wide variety of industrial Ethernet cables are now available, the choice of cable depends on environmental conditions and system life expectancy. Ethernet-based protocols like PROFINET and Ethernet/IP are being increasingly incorporated in automation technologies, such as a programmable logic controller (PLC) communication and industrial robots.

The worldwide market for Industrial Ethernet Cables is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
