## Abstracts

According to our (Global Info Research) latest study, the global Industrial Facility Digital Twins market size was valued at US\$ 746 million in 2025 and is forecast to a readjusted size of US\$ 1454 million by 2032 with a CAGR of 9.9% during review period.

Industrial Facility Digital Twins are digital mirroring technology for physical factories. It achieves real-time mapping and closed-loop interaction between the physical and digital worlds by constructing a high-fidelity model of the physical factory in virtual space, perfectly mirroring the physical factory. The system integrates IoT sensors, 3D modeling, industrial big data, and simulation algorithms to digitally reproduce all elements of the production line's operating status, equipment health, process flow, and environmental parameters. It not only provides real-time monitoring and visual management but also predicts equipment failures and simulates process optimization schemes through mechanistic models and data analysis, feeding back optimization instructions to the physical equipment. This technology is widely used in smart manufacturing, energy and chemical industries, water treatment, and other fields, aiming to improve production efficiency, reduce operating costs, and ensure production safety.
