Abstracts

According to our (Global Info Research) latest study, the global Industrial Fasteners market size was valued at US\$ 85690 million in 2024 and is forecast to a readjusted size of USD 129560 million by 2031 with a CAGR of 6.2% during review period.

A fastener is a hardware device that mechanically joins or affixes two or more objects together. In general, fasteners are used to create non-permanent joints; that is, joints that can be removed or dismantled without damaging the joining components. Welding is an example of creating permanent joints.

Fasteners can also be used to close a container such as a bag, a box, or an envelope; or they may involve keeping together the sides of an opening of flexible material, attaching a lid to a container, etc. There are also special-purpose closing devices, e.g. a bread clip.

Some types of woodworking joints make use of separate internal reinforcements, such as dowels or biscuits, which in a sense can be considered fasteners within the scope of the joint system, although on their own they are not general purpose fasteners.

Global Industrial Fasteners key players include W?rth, PCC, ITW, Alcoa, etc. Global top four manufacturers hold a share about 10%.

Europe is the largest market, with a share about 30%, followed by North America and China, both have a share about 50 percent.
