Abstracts

An optical fiber or optical fibre is a flexible, transparent fiber made by drawing glass (silica) or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data rates) than electrical cables.

SCOPE OF THE REPORT:

This report focuses on the Industrial Fiber Optic in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Fiber optic cables are becoming ever more present in the industrial environment, as they are immune to electromagnetic interference and provide outstanding bandwidth. When considering fiber optic cables for the industrial environment, how the fiber optic cable is terminated, is a key component in addition to the resistance to temperatures, abrasion, UV and lubricants. In the industrial environment, shorter lengths of fewer fibers are typically needed. It may not be practical to have to terminate the fibers using an enclosure and fan out kits. When developing our Levels offerings, the ease of termination was taken heavily into consideration.

The worldwide market for Industrial Fiber Optic is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
