Abstracts

Blanching is a type of cooking process in which food products are heated using water or steam for a short time. Blanching is usually done before canning, drying, or freezing of food products. It is a safe and effective way to inactivate bacterial and enzymatic actions, which affects the nutrient content, color, flavor, or texture of food products. Blanching helps in cleaning the surface of food products, reduces the loss of vitamins, softens food products, and brightens the color.
