Abstracts

The global Industrial Furnace market size is expected to reach \$ 17890 million by 2029, rising at a market growth of 6.7% CAGR during the forecast period (2023-2029).

Global key players of industrial furnace include Andritz, Inductotherm Corp and Despatch. Global top three manufacturers hold a share about 5%. The global origin is mainly located in North America, Europe, China and Japan, with Europe being the largest production region, holding about 34% of the market share. Combustion type is the largest segment, with a share about 58%. And in terms of application, the largest application is surface coating, with a share about 35%.

An industrial furnace, also known as a direct heater or a direct fired heater, is a device used to provide heat for an industrial process, typically higher than 400 degrees Celsius. They are used to provide heat for a process or can serve as reactor which provides heats of reaction. Furnace designs vary as to its function, heating duty, type of fuel and method of introducing combustion air. Heat is generated by an industrial furnace by mixing fuel with air or oxygen, or from electrical energy. The residual heat will exit the furnace as flue gas.
