## Abstracts

The global Industrial Gas Spring market size is expected to reach \$ 3240 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

An Industrial Gas Spring is a type of spring that, unlike a typical metal spring, uses a compressed gas, contained in a cylinder and compressed by a piston, to exert a force. An Industrial Gas Spring in compression is similar to a coil spring but normally much flatter. Compression Industrial Gas Springs have the rod out and the load from the application forces the rod in. Typically mounted so they are rod down in the position in which they spend the most time. This allows the oil contained within Industrial Gas Spring to lubricate the rod seals. By varying the design of the piston, seals and bearings and by modifying the quantity and viscosity or the lubricating oil can provide Industrial Gas Springs with different operating characteristics.

Global Industrial Gas Spring key players include Stabilus, Suspa, Lant, Bansbach, WDF, etc. Global top five manufacturers hold a share about 40%. Europe is the largest market, with a share about 45%, followed by United States and China, both with a share about 20 percent. In terms of product, Swivel chair Industrial Gas Spring is the largest segment, with a share about 20%. And in terms of application, the largest application is Automotive, followed by Furniture, Industrial, Aerospace, Medical, etc.
