## Abstracts

According to our (Global Info Research) latest study, the global Industrial Gas Turbine Generators market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Industrial Gas Turbine Generators are a type of power generation equipment that uses gas as fuel. It consists of two parts: gas turbine and generator. The gas turbine generates high-temperature and high-pressure gas by burning gas, which drives the axial flow compressor to rotate, compresses the air and injects it into the combustion chamber for combustion, and then pushes the generated high-temperature and high-pressure gas to the turbine to rotate the turbine. The rotation of the turbine drives the rotation of the generator connected to the same shaft, and the generator converts mechanical energy into electrical energy to realize the process of generating electricity. Industrial gas turbine generators have the characteristics of high efficiency, quick start, low emissions, and high reliability, and are widely used in industrial production, energy supply and other fields.
