Abstracts

The global Industrial Gas Turbine Generators market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Industrial Gas Turbine Generators are a type of power generation equipment that uses gas as fuel. It consists of two parts: gas turbine and generator. The gas turbine generates high-temperature and high-pressure gas by burning gas, which drives the axial flow compressor to rotate, compresses the air and injects it into the combustion chamber for combustion, and then pushes the generated high-temperature and high-pressure gas to the turbine to rotate the turbine. The rotation of the turbine drives the rotation of the generator connected to the same shaft, and the generator converts mechanical energy into electrical energy to realize the process of generating electricity. Industrial gas turbine generators have the characteristics of high efficiency, quick start, low emissions, and high reliability, and are widely used in industrial production, energy supply and other fields.

This report studies the global Industrial Gas Turbine Generators production, demand, key manufacturers, and key regions.
