Industrial gases are supplied in a range of different cylinders depending on the properties of the gas. Some are delivered at high pressures, while others are offered only at low pressures. Thus, the properties of an industrial gas decide the way in which it is supplied to the customer. For example, gases such as nitrogen, oxygen, hydrogen, and argon can be readily compacted into a cylinder at pressures up to 200 bar.

Scope of the Report:

This report focuses on the Industrial Gases for Metals and Metal Fabrication in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
