According to our (Global Info Research) latest study, the global Industrial GigE Cameras market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Gigabit Ethernet, in short GigE, is the most common interface for connecting a vision camera in machine vision applications. PoE stands for Power over Ethernet. This means that the network cable works as communication and as power supply for the camera. Gigabit Ethernet cameras are used in factories for product quality inspections and automating processes. The Gigabit Ethernet camera provides RAW image over a network cable to the computer. Next, the image-processing software on the computer analyses these images. The result of this process determines what comes next. For example, controlling a robot or separating good from bad products.
