Abstracts

According to our (Global Info Research) latest study, the global Industrial Glass Edging Machine market size was valued at US$ 370 million in 2025 and is forecast to a readjusted size of US$ 527 million by 2032 with a CAGR of 5.2% during review period.

In 2025, global production of industrial glass edging machines reached 9,470 units, with an estimated average selling price of US$38,000 per unit. Industrial glass edging machines utilize diamond grinding wheels, resin wheels, polishing wheels, and a circulating cooling water system to perform rough grinding, fine grinding, chamfering, beveling, rounding, beveling, and polishing on the edges of flat, laminated, or special glass. Their core purpose is to remove micro-cracks and sharp angles from the cut edges, improving the edge strength, safety, appearance consistency, and yield of subsequent tempering, lamination, and insulated glass processes. They are mainly used for edge processing of architectural curtain wall glass, window and door glass, insulated glass, tempered glass, laminated safety glass, shower room glass, furniture glass, mirror glass, appliance panel glass, rail transit glass, and some automotive and photovoltaic glass. The upstream of the industry chain mainly includes cast iron or welded steel frames, spindles and grinding heads, motors and reduction mechanisms, servo systems, frequency converters, PLCs/HMIs, linear guides, lead screws, conveyor belts, pneumatic components, circulating water and sewage treatment systems, as well as consumables such as diamond grinding wheels, resin wheels, and cerium oxide polishing materials. The midstream involves OEM design, assembly, software control, installation, commissioning, and after-sales service. The downstream serves architectural glass processing plants, insulated glass plants, tempered glass plants, door and window curtain wall plants, shower room and furniture glass plants, mirror manufacturers, home appliance glass manufacturers, and automotive and
