According to our (Global Info Research) latest study, the global Industrial Grade Antimony Trifluoride market size was valued at US\$ 189 million in 2024 and is forecast to a readjusted size of USD 250 million by 2031 with a CAGR of 4.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Industrial grade antimony trifluoride is an important inorganic compound. Antimony trifluoride is a white to gray crystalline powder that is easily deliquescent. Its melting point is 292°C, boiling point is 376°C, and density is 4.379g/cm³. In addition, it has a high solubility in water, and 385 grams of antimony trifluoride can be dissolved in every 100 ml of water at 20°C. At the same time, it is also soluble in methanol, ethanol and polar organic solvents, but insoluble in benzene, chlorobenzene and petroleum ether. Antimony trifluoride should be stored in a cool, dry and well-ventilated warehouse. The packaging should be sealed and stored separately from oxidants, acids, edible chemicals, etc., and mixed storage should not be allowed. In addition, the storage area should be equipped with suitable materials to contain leaks to prevent harm to the environment and human body.
