Abstracts

The global Industrial Grade Antimony Trioxide market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Antimony(III) oxide is the inorganic compound with the formula Sb_2O_3 . It is found in nature as the minerals valentinite and senarmonite. Like most polymeric oxides, Sb_2O_3 dissolves in aqueous solutions with hydrolysis.

Industrial grade antimony trioxide generally has a purity of 98%-99.7%, and industrial grade antimony trioxide is generally used in industrial industries. The main application for Antimony Trioxide is use as Flame Retardant. In addition, Antimony Trioxide can be used as an opacifying agent for glasses, ceramics and enamels and in it can be found in specialty pigments. Antimony trioxide can also be used as a catalyst in the formation of polyethylene terephthalate. In the production of titanium dioxide, antimony trioxide acts as a flocculant which prevents caking.

This report studies the global Industrial Grade Antimony Trioxide production, demand, key manufacturers, and key regions.
