According to our (Global Info Research) latest study, the global Industrial Grade Calcium Carbide market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Industrial grade calcium carbide, also known as industrial grade calcium carbide, is a chemical substance with the chemical formula CaC_2 . It is formed by the reaction of limestone and coke in a high-temperature furnace and usually comes in the form of gray lumps, lumps or powder. Technical grade calcium carbide is a toxic chemical and can release acetylene gas when in contact with water or moist air. It is mainly used to produce acetylene as a raw material for the production of various organic compounds, such as polyethylene and acetylenic alcohol. In addition, it is also used to react with water to produce acetylene gas to make matches and fireworks. Industrial grade calcium carbide can also be used as a flux and deoxidizer in metal smelting and steel manufacturing.
