According to our (Global Info Research) latest study, the global Industrial Grade Lithium Metal market size was valued at US\$ 492 million in 2025 and is forecast to a readjusted size of US\$ 715 million by 2032 with a CAGR of 5.3% during review period.

Industrial Grade Lithium Metal refers to lithium metal products with relatively lower purity (typically around 99.5%?99.9%) that are suitable for general industrial applications such as chemical synthesis, alloy production, catalysts, and general manufacturing. This grade is not intended for high?precision uses like advanced batteries or semiconductor manufacturing due to its higher impurity levels, but it remains cost?effective and widely used in traditional industrial processes. In 2025, global Industrial Grade Lithium Metal production reached approximately 5760 tons, with an average global market price of around 83098 USD/ton,.The production capacity for Industrial Grade Lithium Metal in 2025 was approximately 8000 tons The typical gross profit margin for Industrial Grade Lithium Metal between 20% and 40%.

The Industrial Grade Lithium Metal Market encompasses the global trade, production, and consumption of lower?purity lithium metal used in traditional industries. Demand is driven by sectors such as chemical manufacturing, metallurgy, and specialty materials, with pricing and supply influenced by lithium raw material availability, processing capacity, and broader trends in the lithium value chain. While not commanding the premium of high?purity grades, industrial grade lithium metal remains an important segment of the overall lithium market.
