Abstracts

The global Industrial Grade p-Chlorocresol market size is expected to reach \$ 209 million by 2032, rising at a market growth of 4.3% CAGR during the forecast period (2026-2032).

Industrial Grade p-Chlorocresol (also known as 4-Chloro-3-methylphenol, PCMC) is an organic compound with the chemical formula C_7H_7ClO (CAS 59-50-7), belonging to the phenolic derivatives class. It appears as a white to off-white crystalline powder or colorless crystals, with a phenolic odor, melting point of 63-65°C, and boiling point of 235°C. Industrial grade products typically have purity levels of 98%-99% and are used as chemical intermediates, preservatives, disinfectants, and fungicides.

The upstream segment includes suppliers of raw materials such as m-cresol, chlorinating agents, and other petrochemical feedstocks. The midstream segment encompasses chlorination synthesis, purification, crystallization, drying, and quality testing performed by specialized chemical manufacturers. Industrial grade p-chlorocresol is categorized by purity grade into 98% grade (industrial grade) and 99% grade (high-purity grade); by application into pharmaceutical intermediates (disinfectants, antiseptics), personal care preservatives, industrial preservatives (metalworking fluids, adhesives, paints), textile and leather fungicides, and agricultural chemicals; by physical form into crystalline powder and granular form. The downstream segment serves pharmaceutical companies, personal care product manufacturers, industrial chemical formulators, textile and leather processors, and agricultural chemical producers through direct sales, distributors, and chemical trading platforms.

The global average selling price for industrial grade p-chlorocresol is approximately US\$2,760 per ton, with annual sales volume reaching approximately 54.7 thousand tons

in 2025. The industry maintains gross margins between 20% and 30%, reflecting the commodity nature of the product and competitive market dynamics.

The global industrial grade p-chlorocresol market is experiencing steady growth, driven by expanding applications in pharmaceuticals, personal care preservatives, and industrial antimicrobial formulations. As a broad-spectrum bactericide and fungicide, p-chlorocresol is increasingly valued for its efficacy in preventing microbial growth across diverse product categories.

A notable trend shaping the market is the growing demand for p-chlorocresol in personal care preservative systems. With tightening regulations on formaldehyde-releasing preservatives and parabens, formulators are increasingly adopting phenolic-based preservatives including PCMC as alternative antimicrobial agents in shampoos, body washes, and cosmetic emulsions. The compound's stability across a wide pH range and compatibility with various formulation ingredients make it particularly attractive for modern personal care applications.
