## Abstracts

According to our (Global Info Research) latest study, the global Industrial Grade Rosin Pentaerythritol Ester market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Rosin pentaerythritol ester has good water resistance and acid resistance, and is widely used in coatings, rubber and adhesives. Due to steric hindrance, the esterification reaction is difficult to complete, so it contains carboxyl groups that have not reacted with pentaerythritol, and has a certain acid value.

Rosin pentaerythritol ester is mainly a modified rosin resin obtained by esterification of resin acid in rosin and pentaerythritol. The main component of rosin is abietic acid type resin acid, so the main component of rosin pentaerythritol ester is abietic acid pentaerythritol ester.
