## Abstracts

According to our (Global Info Research) latest study, the global Industrial Grade Silicon Tetrachloride market size was valued at US\$ 828 million in 2025 and is forecast to a readjusted size of US\$ 1115 million by 2032 with a CAGR of 4.4% during review period.

Industrial-grade silicon tetrachloride ( $\text{SiCl}_4$ ) is a basic chlorosilane chemical used in fields such as organosilicon, silica, and chlorosilane chemicals. It is typically a colorless, transparent liquid with strong volatility and hygroscopicity. Its purity is generally in the range of 98%–99.5%, with impurities including trichlorosilane ( $\text{SiHCl}_3$ ), dichlorodisilazane ( $\text{Si}_2\text{Cl}_2$ ), hydrogen chloride (HCl), and ppm-level metal ions. Industrial-grade products typically have a moisture content of 50–200 ppm and metal impurities controlled at the ppm level, suitable for large-scale chemical reactions, but not meeting the ultra-high purity requirements of the electronics industry.

In contrast, high-purity (electronic-grade) silicon tetrachloride requires a purity of 99.999% (5N) to 99.99999% (7N), with metal impurities controlled at the ppb–ppt level, near-zero moisture, and requires multi-stage distillation, deep purification, and ultra-clean processes. It is mainly used in high-end applications such as optical fiber preforms and semiconductor materials. The product has an average price of approximately US\$1,050 per ton and global sales of approximately 766,000 tons.
