## Abstracts

According to our (Global Info Research) latest study, the global Industrial Grade Sodium Dithionite market size was valued at US\$ 325 million in 2024 and is forecast to a readjusted size of USD 353 million by 2031 with a CAGR of 1.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Industrial-grade sodium dithionite (CAS: 7775-14-6), is a versatile reducing agent widely used in the textile industry for vat dyeing, reductive cleaning, printing, and bleaching of fabrics such as silk, wool, and nylon. Due to its heavy metal-free composition, bleached fabrics exhibit vibrant colors and improved colorfastness. Sodium dithionite also finds application in organic synthesis as a reducing agent or bleaching agent in the production of dyes and pharmaceuticals. It is effective in the bleaching of wood pulp for papermaking. The substance appears as white crystalline granules or light yellow powder with a bulk density of 0.7-1.0 g/m<sup>3</sup>, a decomposition point of 300°C, and an ignition temperature of 250°C. It is insoluble in ethanol but dissolves in sodium hydroxide solutions, reacting vigorously with water and potentially causing combustion.
