According to our (Global Info Research) latest study, the global Industrial Grade Tetrahydrophthalic Anhydride market size was valued at US\$ 70 million in 2024 and is forecast to a readjusted size of USD 103 million by 2031 with a CAGR of 5.6% during review period.

Tetrahydrophthalic Anhydride (THPA) is an organic acid anhydride compound with excellent performance. It is widely used as a curing agent for epoxy resins, as well as a modifier for unsaturated polyester resins and alkyd resins. It effectively improves the adhesion, elasticity, gloss, and water resistance of coatings, enhancing their overall performance and extending their service life. In the plastics industry, THPA acts as a plasticizer to significantly improve the cold resistance and heat resistance of PVC, while being non-toxic, thus offering high safety and environmental friendliness. Additionally, THPA is an important intermediate for the synthesis of pesticides and pharmaceuticals. Industrial-grade THPA is typically used for large-scale production and has a high market demand.
