## Abstracts

The global Industrial Grade Yuanming Powder market size is expected to reach \$ 2862 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Industrial Grade Yuanming Powder refers to sodium sulfate products used in industrial production, usually made from natural saltpeter resources or chemical by-product sodium sulfate as raw materials, processed through purification, crystallization, and drying processes. The main components are anhydrous sodium sulfate or sodium sulfate decahydrate, with high purity, stable impurity control, and low cost. It is widely used as a filler, additive, or basic chemical raw material in industrial production, mainly applied in detergent manufacturing, glass production, textile printing and dyeing, papermaking, metallurgy, and chemical industries. Among them, it is an important filler material in the detergent industry, used in the glass industry to improve glass melting performance and reduce bubbles, and is one of the bulk chemicals with high demand in the basic chemical industry. In 2025, global Industrial Grade Yuanming Powder production reached approximately 18,013 K MT, with an average global market price of around US\$ 114 per MT.

The overall demand for industrial grade yuanming powder in the market is closely related to the development of daily chemical products, glass manufacturing, and textile printing and dyeing industries. With the stable growth of global detergent consumption and the maintenance of a certain scale of demand for flat glass and packaging glass, the industrial grade sodium sulfate powder market maintains a relatively stable demand foundation. At the same time, driven by environmental policies and the trend of comprehensive resource utilization, the utilization rate of by-product sodium sulfate resources continues to improve. Enterprises pay more attention to product purity, stable

supply, and cost control. In the future, the development of the industry will mainly focus on large-scale production, resource recycling, and application structure optimization.
