The global Industrial Helium Purification market size is expected to reach \$ 619.8 million by 2029, rising at a market growth of 8.4% CAGR during the forecast period (2023-2029).

In the global market, the core manufacturers of Industrial Helium Purification in the global market are Entegris, Taiyo Nippon Sanso, Ivys Adsorbation, Air Liquide and ect. The top six companies within this industry account for over 60% of the market share. North America, Europe, Asia Pacific, and Latin America are the major production regions for this product, with North America accounting for around 40% of the global market share. The product can be classified on the basis of production process as cryogenic distillation, pressure swing adsorption (PSA), membrane separation, and others. Industrially purified helium is used in a wide range of applications in the medical, semiconductor, aerospace, and other fields.

Helium purification is an international frontier research field, and the methods used include low temperature condensation, membrane separation, pressure swing adsorption, chemical adsorption and other methods. The common method of helium purification cycle equipment is low temperature and condensation method. In addition, a large number of new technologies in the low-temperature field have been adopted during the equipment development process, including vibration reduction of high-pressure helium compressors, special welding technology for low-temperature and high-pressure copper pipes, and low-temperature high-pressure joint sealing technology, etc., to optimize products. On this basis, a breakthrough has been made in the purification technology of membrane separation method, and the low-purity helium with a purity of ?10% is purified to more than 99.5% through a composite purification and separation method, and the system purification recovery rate is ?60%.
