According to our (Global Info Research) latest study, the global Industrial I2C Serial EEPROM market size was valued at US\$ 174 million in 2025 and is forecast to a readjusted size of US\$ 281 million by 2032 with a CAGR of 7.1% during review period.

Industrial I2C Serial EEPROMs are non-volatile memory chips with I2C bus interface, specially designed for industrial automation, industrial instruments, data acquisition equipment and other industrial scenarios. They can retain data after power failure, and feature wide operating temperature range, high stability, strong anti-interference performance and low power consumption, ensuring long-term maintenance-free stable operation of industrial equipment.

The price of industrial I2C serial EEPROMs varies by storage capacity, package type, temperature grade and purchase volume. The unit price of mainstream industrial-grade models ranges from 0.15 to 1.00 US dollars each. Small-capacity models are priced at 0.15 to 0.45 US dollars each, while medium and large-capacity models cost 0.50 to 1.00 US dollars each. Bulk orders enjoy a discount of 10% to 20%. The industrial chain is well-developed. The upstream includes wafers, photoresists, basic chemical raw materials and various electronic auxiliary materials. The midstream focuses on chip design, wafer fabrication, chip testing and packaging. Many professional manufacturers at home and abroad occupy a major market share. The downstream serves manufacturers of industrial control equipment, industrial instruments, automation systems and system integrators, forming a complete industrial chain from raw material supply and chip production to end application.
