According to our (Global Info Research) latest study, the global Industrial Installation Testers market size was valued at USD 290.4 million in 2023 and is forecast to a readjusted size of USD 361.8 million by 2030 with a CAGR of 3.2% during review period.

Electrical testers are used to check both AC and DC voltage and amperage as well as basic circuit characteristics like continuity, shorts and open circuits, and polarity, among others. Installation Testers perform tests such as earth loop, line loop, PFC and PSC tests.

Electrical Installation testing is essential to ensure safe operating standards for any product that uses electricity. Various governments and agencies have developed stringent requirements for electrical products that are sold world-wide. In most markets it is mandatory for a product to conform to safety standards promulgated by safety and standard agencies such as UL, CE, VDE, CSA, BSI, CCC and so on. To conform to such standards, the product must pass safety tests such as the high voltage test (also called as Dielectric voltage-withstand test or high potential test), Insulation Resistance Test, Ground (Earth) Bond & Ground Continuity Test & Leakage Current Test (also called as Line Leakage Test, Earth Leakage Current Test, Enclosure Leakage Current Test or Patient Leakage Current Test).
